AB The present invention relates to a cytoplasmic transduction peptide (CTP) showing transduction potential, as well as cytoplasmic remaining potential and various uses thereof. The CTP of this invention exhibits a transduction potential identical or higher than the conventional protein transduction, PTD, and a strong tendency to remain in the cytoplasm, so that it is very useful in inducing cytotoxic T lymphocytes (CTL) and a drug delivery system (DDS) targeting cytoplasm.

PRIORITY APPLN. INFO.: US 2003-458026P P 20030328

ED Entered STN: 11 Feb 2005

AB The present invention is directed to methods for selecting a variant of a peptide epitope which induces a CTL response against another variant(s) of the peptide epitope, by determining whether the variant comprises only conserved

residues, as defined herein, at non-anchor positions in comparison to the other variant(s). These epitopes are supermotifs or motifs that bind to HLA-A1, HLA-A2, HLA-A3, HLA-A11, HLA-A24, HLA-B7, HLA-B27, HLA-B44, HLA-B58 and HLA-B62. These epitopes are identified in Gag, Env, Pol, Nef, Rev, Tat, Vif, Vpr and Vpu of HIV; Pol, Env, Core and NS1/Env2 of HBV; Core, E1, E2, NS1, NS2, NS3, NS4 and NS5 of HCV; E1, E2, E3, E4, E5, E6, E7, L1 and L2 of HPV; and CSP, SSP2, EXP1 and LSA1 or Plasmodium falciparum. The present invention is also directed to variants identified by the methods above; peptides comprising such variants; nucleic acids encoding such variants and peptides; cells comprising such variants, and/or peptides, and/or nucleic acids; compns. comprising such variants, and/or peptides, and/or nucleic acids, and/or cells; as well as therapeutic and diagnostic methods for using such variants, peptides, nucleic acids, cells, and compns.

IC ICM C12N

CC 15-2 (Immunocytochemistry)

Section cross-reference(s): 3, 9, 63

IT Vaccines

(AIDS; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(CS (circumsporozoite); identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E1; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E2; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E3; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E5; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E6; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(E7; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Proteins

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); PRP (Properties); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(EXP1; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(HLA (human leukocyte-associated antigen), HLA-B62; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(HLA, class I; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(HLA, class II; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(HLA-A11; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

(HLA-A1; identification of HLA-restricted CTL epitopes and preparation of polyepitopic polypeptides or nucleic acids for diagnosis, prognosis and treatment of infectious disease)

IT Histocompatibility antigens

RL: ARU (Analytical role, unclassified); BSU (Biological study, unclassified); DGN (Diagnostic use); THU (Therapeutic use); ANST (Analytical study); BIOL (Biological study); USES (Uses)

ED Entered STN: 29 Oct 2004

AB The present invention provides compns. and methods for inhibiting the binding of the carboxy-terminus of MUC1 to PDZ domain(s) and to enhance the sensitivity of MUC1 expressing cancer cells to chemotherapeutic agents. Specifically, the PDZ domains may suitably be ZO-1 d2, SIP1 dL, LIM MYSTIQUE, AIPC, KIAA0751, MAST2, PRIL-16 dL, GRIP2 d5, SITAC 18, NSP or KIAA1526 dL, and wherein the PDZ domain may be within a MUC1-expressing cancer. The method of enhancing the sensitivity of cancer cells to chemotherapeutic agents comprises contacting the cells with an effective amount of an agent that inhibits the binding of MUC1 to a PDZ domain.

ED Entered STN: 28 Nov 2003

AB The present invention relates to a cytoplasmic transduction peptide (CTP)

showing transduction potential, as well as cytoplasmic remaining potential and various uses thereof. The CTP of this invention exhibits a transduction potential identical or higher than the conventional protein transduction, PTD, and a strong tendency to remain in the cytoplasm, so that it is very useful in inducing cytotoxic T lymphocytes (CTL) and a drug delivery system (DDS) targeting cytoplasm.

ED Entered STN: 28 Nov 2003

AB The present invention relates to internalizing peptides which facilitate the uptake and transport of cargo into the cytoplasm and nuclei of cells as well as methods for the identification of such peptides. The internalizing peptides of the present invention are selected for their ability to efficiently internalize cargo into a wide variety of cell types both in vivo and in vitro. The method for identification of the internalizing peptides of the present invention comprises incubating a target cell with a peptide display library, isolating peptides with internalization characteristics and determining the ability of said peptide to internalize cargo into a cell. The peptides of the invention are useful in therapeutic applications, such as: stimulating the immune response in a subject; selectively inducing apoptosis in cells, such as cancer and arthritic cells; facilitating transfer of proteins and peptides to the lung for treatment of cystic fibrosis, lung inflammation or injury.

AB The present invention relates to protein and cDNA sequences of human and mouse cytoplasmic scaffolding protein JLP and their functions in modulating apoptotic response. Specifically, the protein tethers MEKK3, MKK4, JNK, p38 MAPK, C-Myc and MAX into a signaling module that controls the apoptotic response. Nucleic acid sequences which encode JLP, and methods of using the JLP nucleic acids and proteins, and mutants thereof, to modulate the apoptotic response in cells are provided.

AB The invention concerns use of (a) an HIV Tat protein or polynucleotide; or (b) an HIV Nef protein or polynucleotide; or (c) an HIV Tat protein or polynucleotide linked to an HIV Nef protein or polynucleotide; and an HIV gp 120 protein or polynucleotide in the manufacture of a vaccine suitable for a prime-boost delivery for the prophylactic or therapeutic immunization of humans against HIV, wherein the protein or polynucleotide is delivered via a bombardment approach. The vaccines were shown to induce antibody and cytotoxic T-cell responses.

AB The present invention relates to novel vectors, to DNA vaccines and gene therapeutics containing said vectors, to methods for the preparation of the vectors and DNA vaccines and gene therapeutics containing the vectors, and to therapeutic uses of said vectors. More specifically, the present invention relates to novel vectors comprising (a) an expression cassette of a gene of a nuclear-anchoring protein, which contains (i) a DNA binding domain capable of binding to a specific DNA sequence and (ii) a functional domain capable of binding to a nuclear component and (b) a multimerized DNA sequence forming a binding site for the anchoring protein, and optionally (c) one or more expression cassettes of a DNA sequence of interest. In particular the invention relates to vectors that lack a papilloma virus origin of replication. The nuclear-anchoring protein might be the E2 protein of Bovine Papilloma Virus type 1 or Epstein-Barr Virus Nuclear Antigen 1. The invention also relates to vectors that lack an origin of replication functional in a mammalian cell. The invention further relates to methods for expressing a DNA sequence of interest in a subject. The vector system expressing bovine papillomavirus type 1 E2 protein (as well as HIV1 nef or GFP reporter) and its 10 binding sites, or expressing Epstein-Barr virus (EBV) EBNA-1 protein and containing 20 binding sites for EBNA-1-(FR element), are demonstrated to have active mechanism of segregation based on a nuclear-anchoring protein and its binding sites that promotes its maintenance in a population of proliferating cells as a transcriptionally active element. The recombinant expression of and cellular and humoral immune response to vectors expressing HIV1 nef or gag, or hybrid of nef and rev and tat (for MultiREG antigens) are detected.

AB The HIV-1-specific cytotoxic T lymphocyte (CTL) response is temporally associated with the decline in viremia during primary HIV-1 infection, but definitive evidence that it is of importance in virus containment has been lacking. Here the authors show that in a patient whose early CTL response was focused on a highly immunodominant epitope in gp160, there was rapid elimination of the transmitted virus strain and selection for a virus population bearing amino acid changes at a single residue within this epitope, which conferred escape from recognition by epitope-specific CTL. The magnitude (>100-fold), kinetics (30-72 days from onset of symptoms) and genetic pathways of virus escape from CTL pressure were comparable to virus escape from antiretroviral therapy, indicating the biol. significance of the CTL response in vivo. One aim of HIV-1 vaccines should thus be to elicit strong CTL responses against multiple codominant viral epitopes.

- IT Envelope proteins
RL: BPR (Biological process); BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study); PROC (Process)
(gp160env; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)
- IT Evolution
(mol.; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)
- IT Gene, microbial
RL: PRP (Properties)
(nef; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)
- IT Gene, microbial
RL: PRP (Properties)
(pol; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)
- IT Gene, microbial
RL: PRP (Properties)
(rev; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of

CTL escape virus)

IT Gene, microbial
Transcription factors
RL: PRP (Properties)
(tat; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT Gene, microbial
RL: PRP (Properties)
(vif; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT Gene, microbial
RL: PRP (Properties)
(vpr; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT Gene, microbial
RL: PRP (Properties)
(vpu; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT 187953-63-5 187953-64-6 187953-65-7 187953-66-8 **187953-67-9**
187953-68-0 187953-69-1 187953-70-4 187953-71-5
RL: PRP (Properties)
(amino acid sequence; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT 185127-18-8, GenBank U21135
RL: PRP (Properties)
(nucleotide sequence; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

IT **187953-67-9**
RL: PRP (Properties)
(amino acid sequence; antiviral pressure exerted by HIV-1 gp160-specific cytotoxic T lymphocytes during primary infection demonstrated by rapid selection of CTL escape virus)

RN 187953-67-9 HCAPLUS

CN Tat protein (human immunodeficiency virus 1 clone WEAU-1.60 gene tat)
(9CI) (CA INDEX NAME)
